SOUTHERN CALIFORNIA HORTICULTURAL SOCIETY

**SHARING
SECRETS**

SEPTEMBER 2007

Compiled by Laura Bauer & Debra Bushweit Galliani

“If you could see one plant in its natural habitat, what would it be and why?”

California Redwood. - *DC, ACCNP*

Clematis viticella and *Iris bakeriana* (and others). - *PM*

Amorphophallus titanum (Corpse Flower). - *JW*

I look forward to spotting any representative of the genus *Dudleya* in the wild. They always surprise me, when I look up and see them hanging on to steep rocky outcrops. I admire their tenacity and their beauty. I would like to be surprised more often. - *ES*

I'd like to see *Rafflesia* in habitat. It's the world's largest flower, and is parasitic so is difficult, if not impossible, to cultivate. It grows in Borneo. - *KM*
